

Micro_Hazelcast Lab

GitHub Repository

Link: <https://github.com/Romko-studik>

Part 1: Setup

```
./start_services.sh
```

Part 2: Testing

1

Launched 3 instances of logging service, each of those started its own hazelcast cluster with 3 nodes each

2,3

Sent 10 messages via facade service, as we can see from logs different logging services saved those messages

```

romko@fedora:~/Documents/UNI/APZ/micro_basics$

```

4

```

{"response":{"messages\":[ ]}\n--\n{"message\":"not implemented yet\"},"romko@fedora
:~/Documents/UNI/APZ/micro_basics$ curl http://localhost:8000/get
{"response":{"messages\":[ ]}\n--\n{"message\":"not implemented yet\"},"romko@fedora
:~/Documents/UNI/APZ/micro_basics$ █

```

I have also implemented a working config-service, which correctly gives facade service the addresses of message service and all 3 of logging services
